AAMC Curriculum Directory

The annually revised *AAMC Curriculum Directory* provides basic objective data on the curriculum of every U.S. and Canadian medical school (including the University of Puerto Rico) matriculating students during the current academic year. Each medical school has a two-page description which outlines the school's instructional program, including required and elective course titles, duration and types of instruction, and specific conditions for learning. In addition, schools are grouped in terms of certain commonalities. Descriptive statistics with frequency tables and categorical listings are drawn from the information provided by the individual schools which identify patterns of change and development in the medical curriculum.

The published information was gathered by the AAMC's Division of Faculty Development and Division of Educational Resources and Programs of the Department of Academic Affairs and the correspondents of the AAMC Group on Medical Education.
